

Airelight Linear2 SC 1.0 Channel Axiom Install

A Step by Step Guide

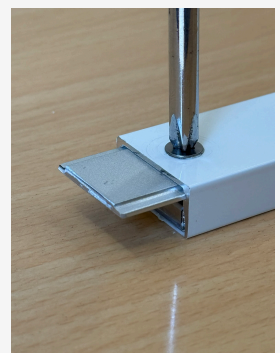

1

Install end caps into fixtures that are at the end of a run prior to mounting on the t-grid. For a 4' run (single fixture) install an end cap at each end. For runs longer than 6' install one end cap at opposite ends of each fixture.

2

Install 1 ALF extended run connector for each intersection of 2 fixtures in a run prior to mounting on t-grid. e.g., One tongue piece in one of the two 6' fixtures in a 12' run.

3

Mount the 1st fixture in a run to the Axiom. For connecting fixtures, position the Axiom clip of the 2nd fixture on the grid without engaging the most inner edge of the Axiom, allowing adjustment.

4

Slide the 2nd fixture along the grid over the extended run connector until it meets the 1st fixture.

5

Push down on Axiom clip to engage completely to the grid. The fixture is now secured. ***Disengage clip if necessary by lifting underneath clip with small screwdriver.

6

Insert red/black wires of yellow connector into +/- terminals of fixture connector. Connect fixtures to power source.
