

Airelight Linear2 SC 1.0 Channel Installation

A Step by Step Guide

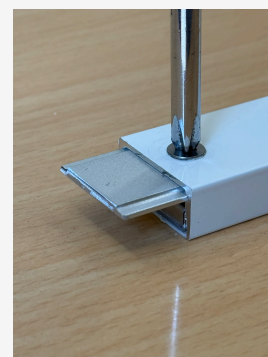

1

Install end caps into fixtures that are at the end of a run prior to mounting on the t-grid. For a 4' run (single fixture) install an end cap at each end. For a 12' run install one end cap at opposite ends of each 6 foot fixture.

2

Install 1 ALF extended run connector for each intersection of 2 fixtures in a run prior to mounting on t-grid. e.g., One tongue piece in one of the two 6' fixtures in a 12' run.

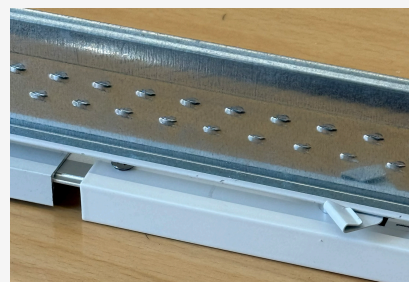

3

Mount the 1st fixture in a run to the t-grid. The extended run connector can be mounted on the first or second fixture.

4

Prepare the 2nd fixture by rotating the mounting clips 90 degrees to the t-grid. Slide the fixture over the extended run connector and rotate mounting clips to secure.

5

Connect fixtures to Power source.
